Delete an Alert

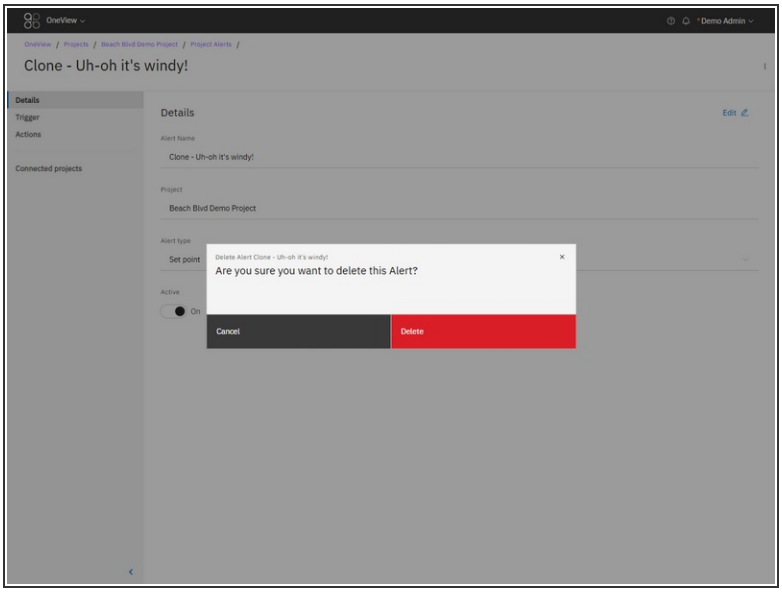

Learn how to delete alerts from your OneView project. This guide shows two methods - deleting from the alerts table or from within the alert.

Written By: Jason

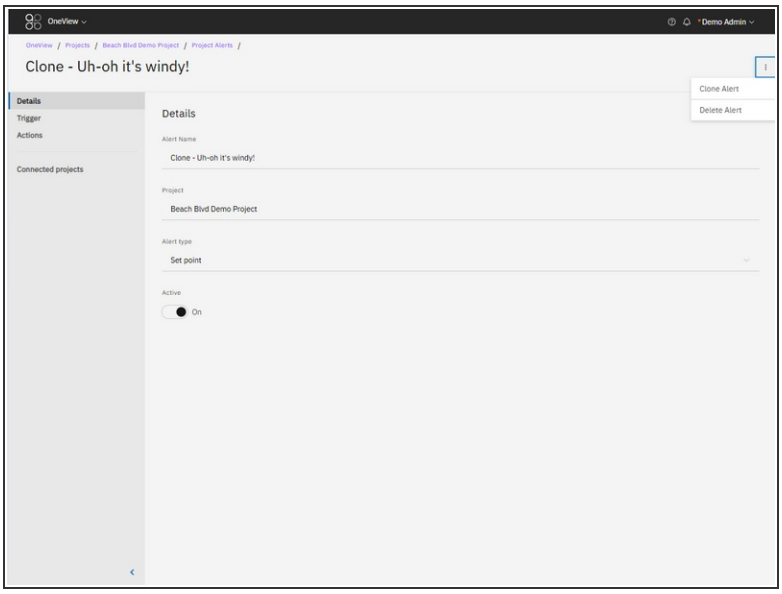

Step 1 — Option 1: Delete from the Alerts Table

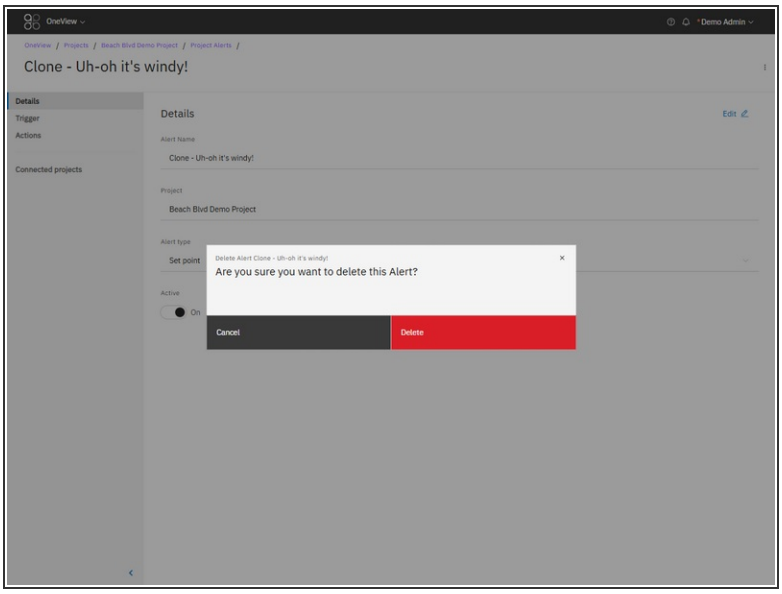

- Go to your project, then select the **Alerts** tab from the left-hand menu.
- Locate the alert you want to delete.
- Click the **overflow menu** (three dots ⋮) at the right end of the alert row.
- Select **Delete**
- A confirmation pop up will appear. The alert name is shown in the pop up for clarity.
- Click **Delete** in the pop up to confirm.
- ⚠ Note: Once deleted, alerts cannot be recovered. Make sure you're deleting the correct alert before confirming.

Step 2 — Option 2: Delete from the Alert Page

- On the **Alerts table**, click the name of the alert you want to delete to open it.
- At the top right corner of the alert page, click the **overflow menu** next to the alert title.
- Select **Delete**.
- A confirmation modal will appear displaying the alert name.
- Click **Delete** to confirm.
- ⚠ Note: Once deleted, alerts cannot be recovered. Make sure you're deleting the correct alert before confirming.
