Events

Events are automatically created when alerts are triggered. They provide a structured record of what happened, including key details, causes, and resolutions, helping teams track, investigate, and respond consistently.

Filter table

Event time	Event name	Type	Source(s)	Sensor	Status	Priority
3 Feb 2026, 3:34 pm	Uh-oh, it's windy!	Set point	DM Site East	WS	New	High
3 Feb 2026, 6:30 am	Offline	Offline	DM Site East	-	New	Medium

INTRODUCTION

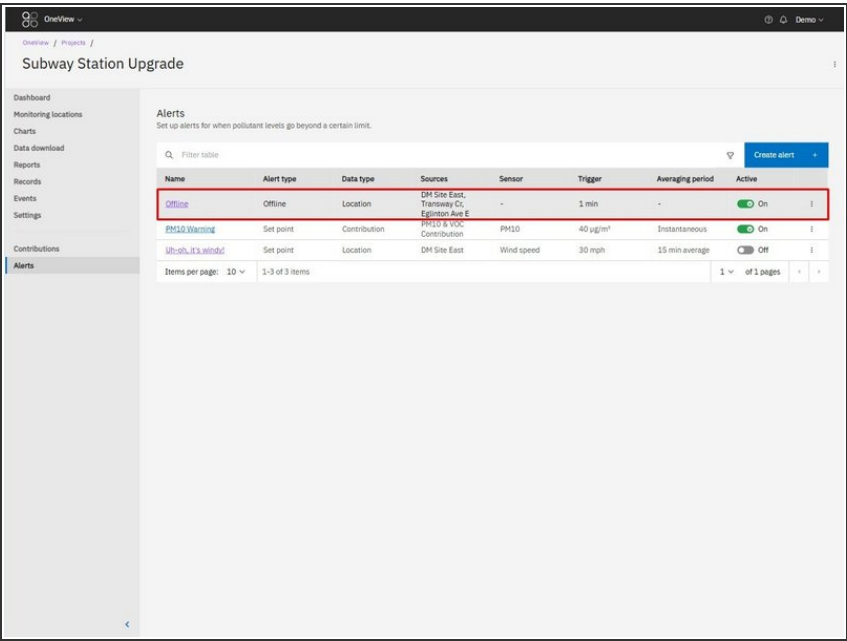

Events provide a structured record of what happens when an alert is triggered in OneView.

Each time an alert triggers, an Event is automatically created. The Event captures key details about the trigger and provides a place to document what was observed, what caused it, and what actions were taken.

Events help teams:

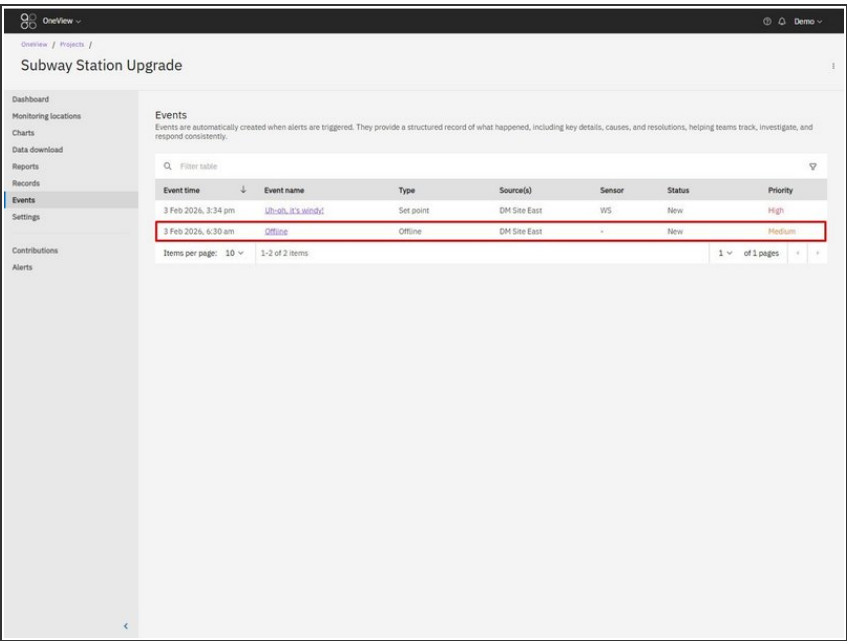

- Maintain a consistent investigation record
- Coordinate across multiple users
- Demonstrate due diligence during reporting or audits

Step 1 — An Alert Triggers

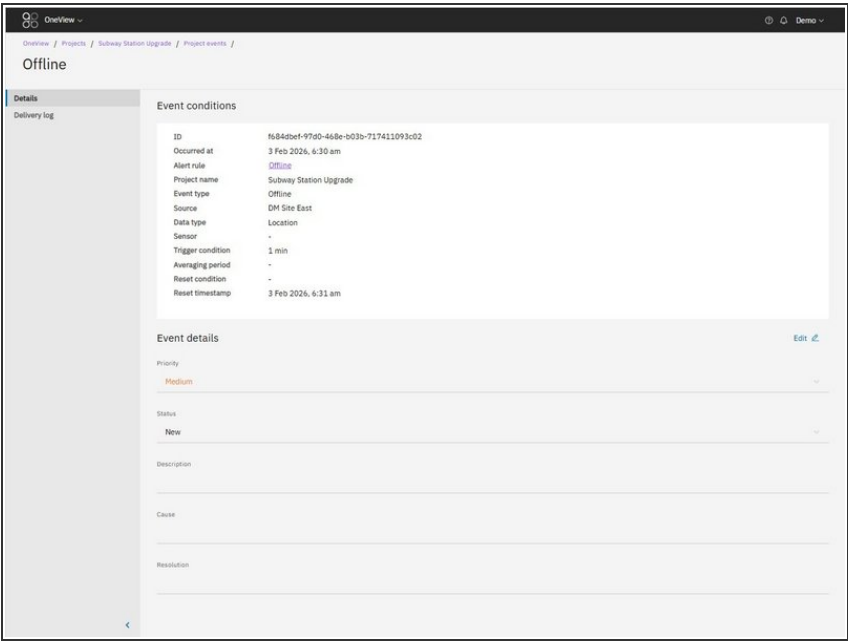

- When alert conditions are met (e.g. threshold exceeded, monitor offline), the alert triggers.

Step 2 — An Event Is Automatically Created

- A new Event is created and logged in the Events table. The Event captures:
 - Event conditions (date and time, trigger details, etc.)
 - Status
 - Priority
 - Editable text inputs for the user to document what action was taken.
 - Notification delivery log

Step 3 — Investigation Details Can Be Added

- Users can add additional context to the Event, such as:
- Description
- Cause
- Action / Resolution
