Light-Up Tie Fighter

Written By: Joshua

INTRODUCTION

We added custom 3D printed LEGO parts and Crazy Circuits to Kylo Ren's Tie Fighter for some awesome effects!

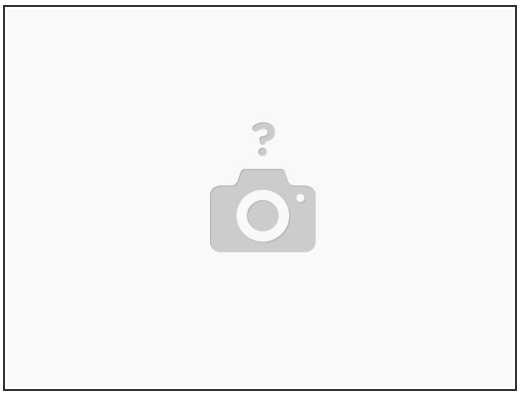

TOOLS:

- 3D Printer (1)
- Scissors (1)

PARTS:

- LEGO Kylo Ren's Tie Fighter (1)
- Crazy Circuits Starter Set (1)

Step 1 — 3D Printer Files

- Double Sided LEGO Stud files can be found on our thingiverse.com account.
- No supports should be needed, but it shouldn't cause any issues if you do use them. We had success both with and without Cura's automated supports.
- Depending on your printer you may need to bump the size up or down a couple percentage points. LEGO has tight tolerances and differences in 3D printers may throw that off.
