G-code for CaribouJobOx

Written By: Caribou3d

INTRODUCTION

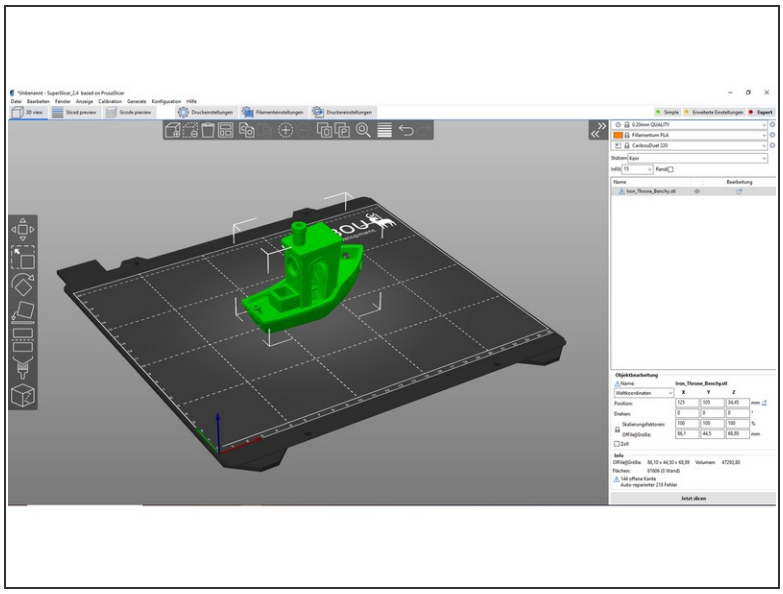

This is a browser based application which takes multiple GCODE files and merges them together into one single file. The operation is very simple.

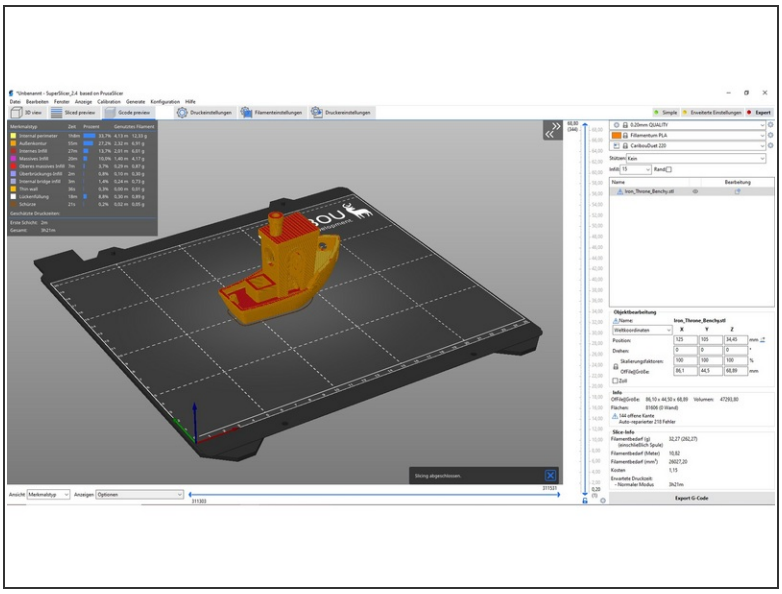

We care about your data security and privacy and that's why this application is designed in a way, that your files never leave your computer and are processed locally (on your computer by a technique called JavaScript), even if the user interface runs in a browser.

By the way, you don't even need internet connection for using jobox.app. You can save it locally and use offline.

- Goto the Caribou site.
- Right click somewhere on the white space to open a website menu
- Click on "Save as" or "Save page as"
- Select the place where the page should be saved,
- Make sure to select "HTML only" as a "File type" option and click "Save".
- Now instead navigating to www.jobox.app you can just double-click on this file and using the full functionality offline.

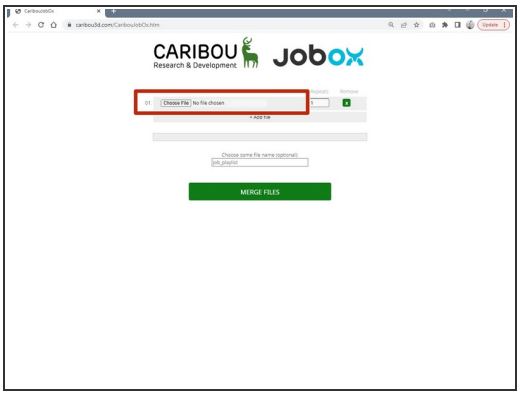

Step 1 — Generation of the G-code

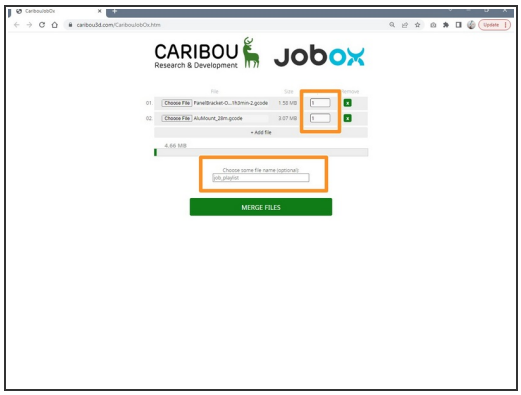

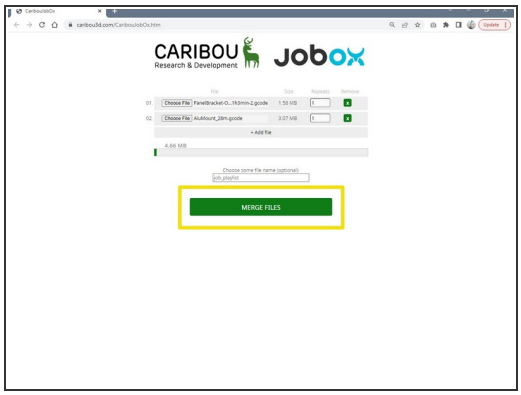

- Create the desired gcode with your STL in any slicer (e.g. SuperSlicer).

Step 2 — CaribouJobOx

- Go to the Caribou site.
- There you can upload up to 450MB of g-codes and assemble them into one file.
- You can increase the number of prints and choose the file name.
- Finally, select "Merge Files" and the file will be downloaded automatically.
- Now you can upload and print the file using your Duet Web Control.

⚠ Make sure you put enough spring steel sheets in the magazine before printing.
