

8.Smart scan setup

This guide shows how to set up Smart Scan on your mobile computer for both short-range and mid-range scanning. Perfect for setup or quick reference.

Written By: Eric Sutter

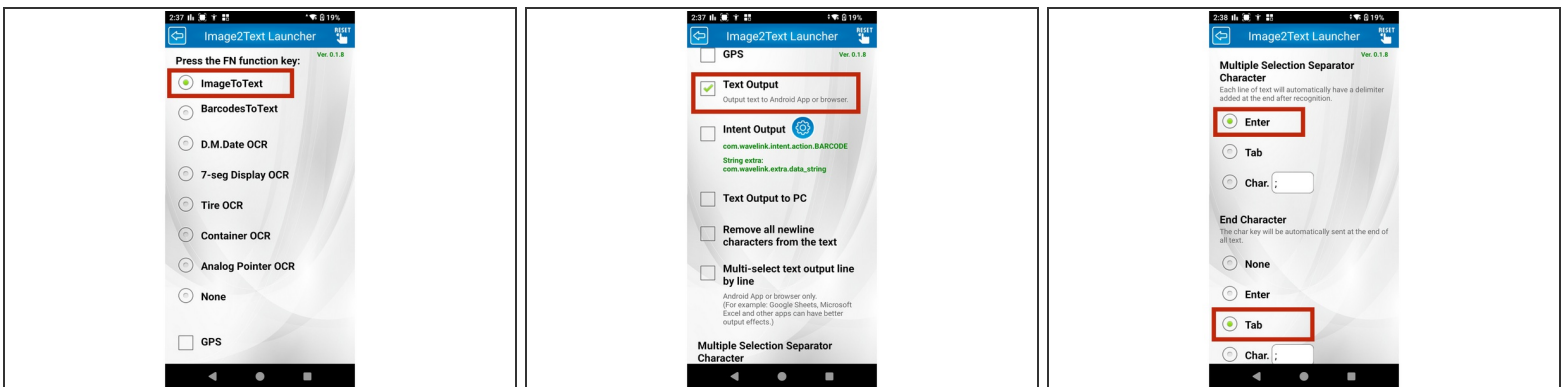

Step 1 — Image2text Launcher setup

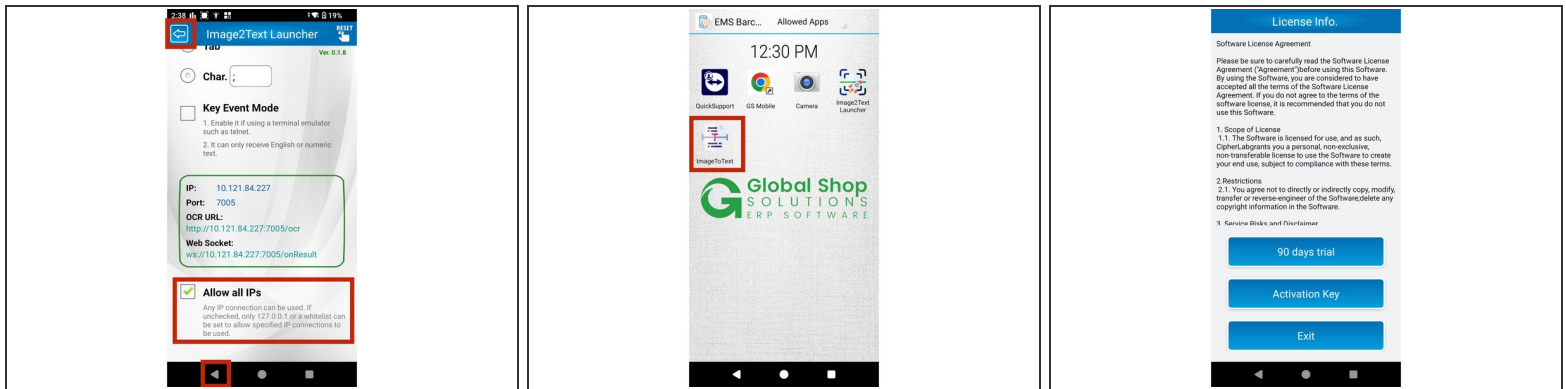

- Ensure your device is on the AppLock Admin screen with the apps shown in the reference photo. If any are missing, follow the app-adding or unhide guides to match.
- Tap on the Image2Text Launcher app (highlighted with a red box); this opens the settings for your SmartScan screen.
- The next photos will show the required checked and unchecked settings under the Launcher app. Refer to the included documents and checklist to ensure proper SmartScan setup and functionality.

Step 2 — Image2text Launcher Settings

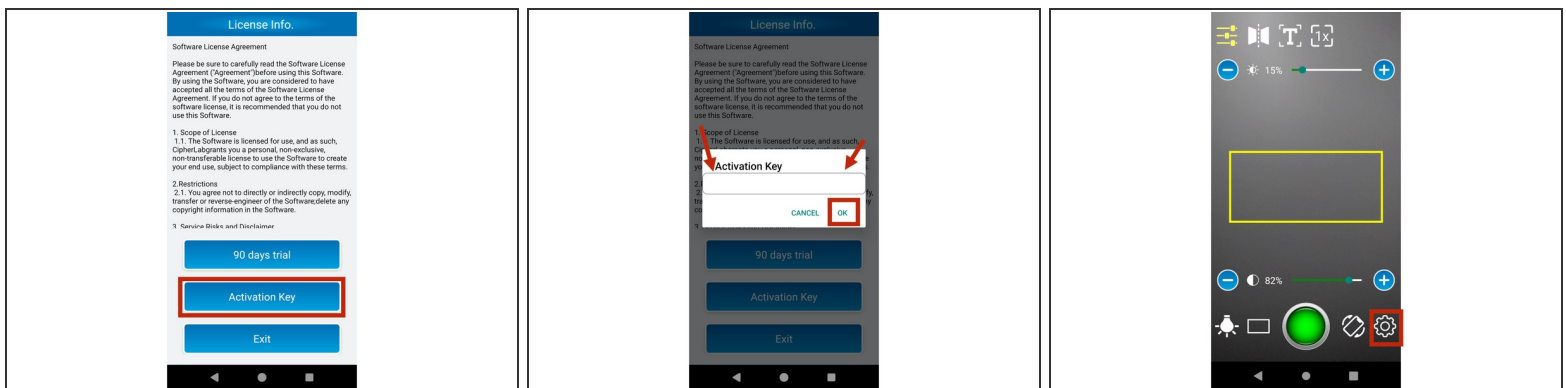

- Ensure all options highlighted with red boxes are checked before proceeding.

Step 3 — Final settings for image2text Launcher

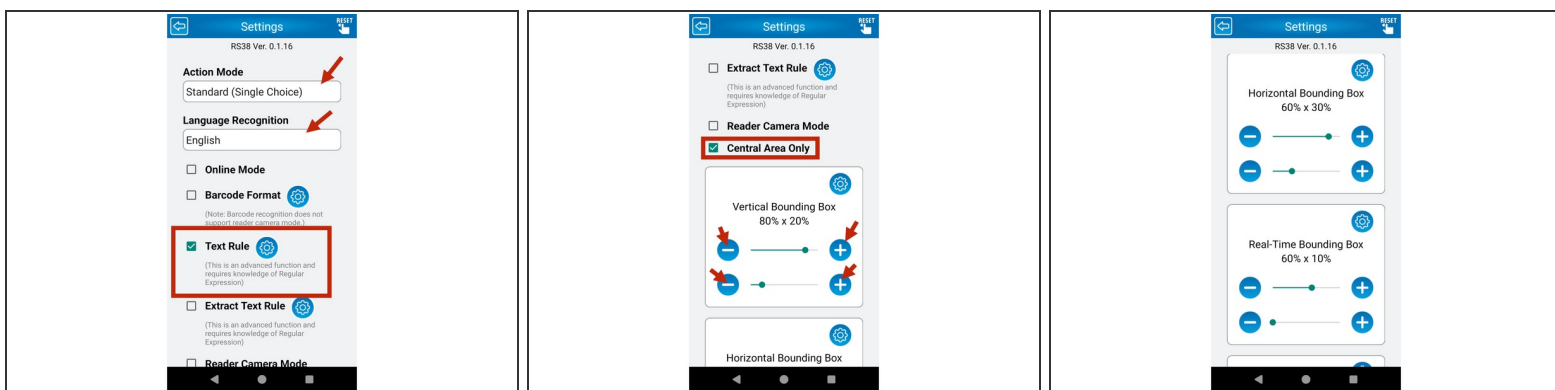

- Once all settings are matched, tap the Back button highlighted in the red boxes—either one will work.
- Once back on the AppLock Admin screen, tap on the ImageToText app (highlighted in a red box). Note the difference between this and the Launcher app.
- The license page will appear the first time you open the app. Ensure you have a license through EMS Barcode. If not, select the trial version to proceed.

Step 4 — Image to text setup

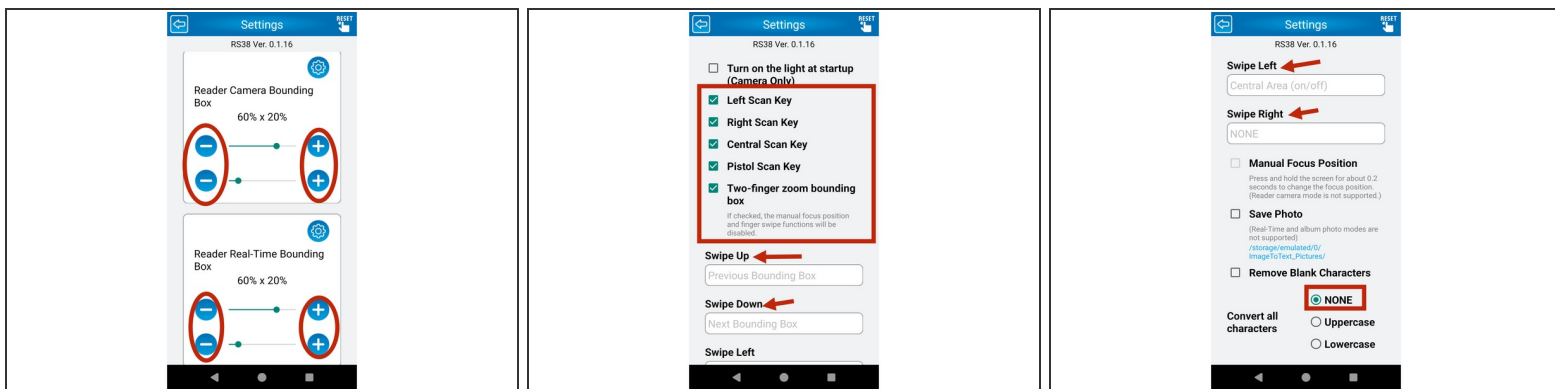

- Tap on the activation button.
- Tap the import box marked by a red arrow, then use the keyboard to enter your activation key.
- After entering the activation key, tap the OK button highlighted in a red box to continue.
- You should now see a camera-like screen with additional setting toggles available.

Step 5

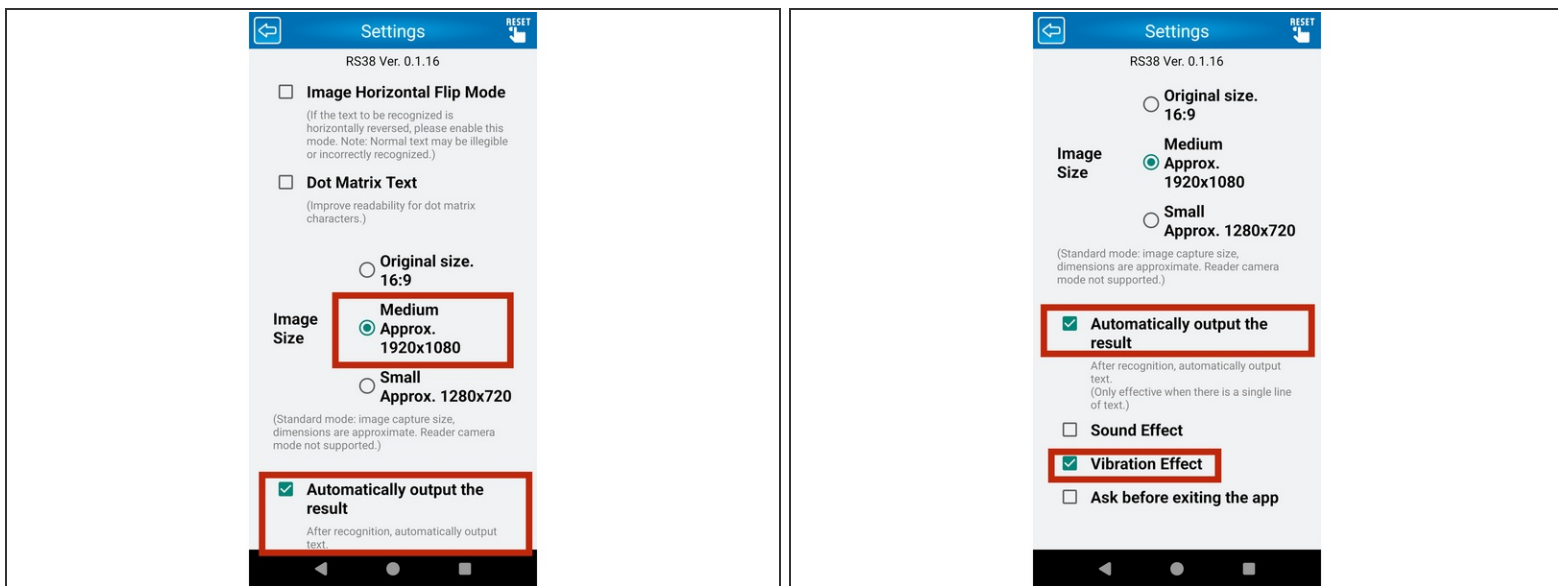

- Confirm your settings match those shown in the reference photos.
- Use the plus and minus buttons to adjust the settings to match the reference. These can be changed later, but this configuration works best for most users.

Step 6

- The arrows in the photo point to settings that should be grayed out and cannot be changed. Make sure these match what is shown.

Step 7

- the sound setting is very important unless you want it to make alot of noise
- Tap the Back button to return to the main camera screen.
