

Stylus Tip Replacement

Written By: Iroh

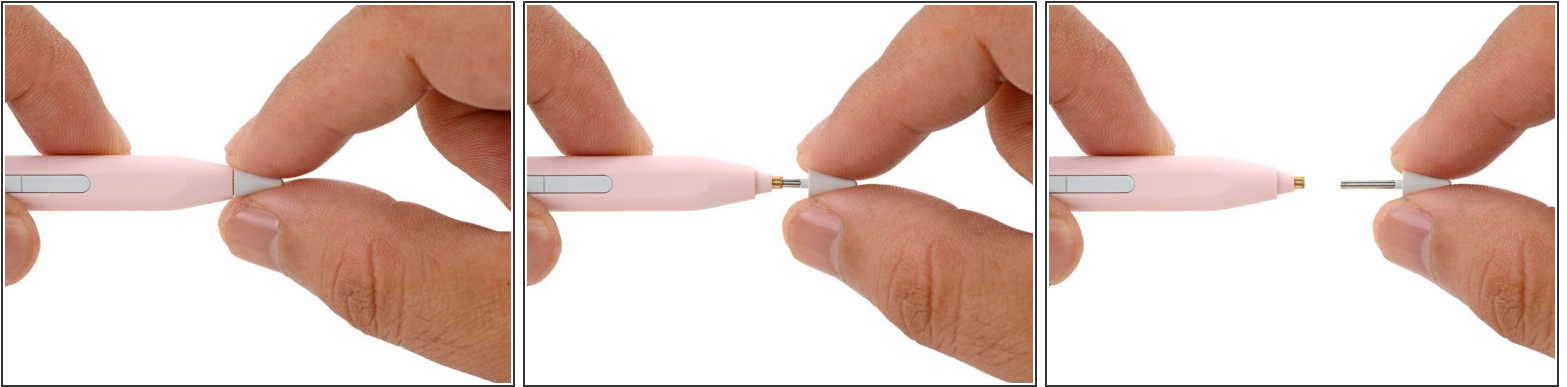

INTRODUCTION

Follow this guide to remove and replace a broken or worn-out tip on your Framework Laptop 12 Stylus.

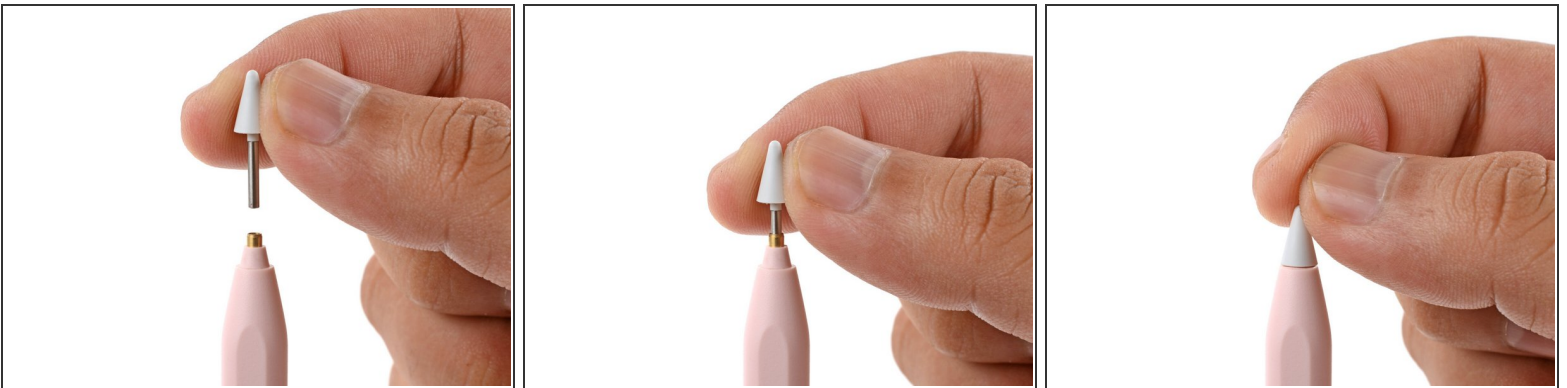

Note: The Stylus comes packaged with spare tips.

Step 1 — Pull the tip out of the Stylus

- Use your fingers to grab the Stylus tip and pull it straight out of the Stylus.
- ❗ If you're having trouble pulling the tip out:
 - [Wrap some tape around the tip](#) to give you more grip.
 - [Use your fingernails to grip the back lip of the tip](#).
 - [Insert thread or dental floss into the seam](#) between the tip and the Stylus barrel and pull gently.

Step 2 — Insert the tip

- Use your fingers to slide the new tip into the Stylus.
- Push the tip in until it bottoms out. It should be able to spin but not fall out.

If you need help, [contact Framework support](#).
