Printing Tips and Best Practices

Some tips and best practices to follow in using and maintaining your Element

Written By: Guy Elston

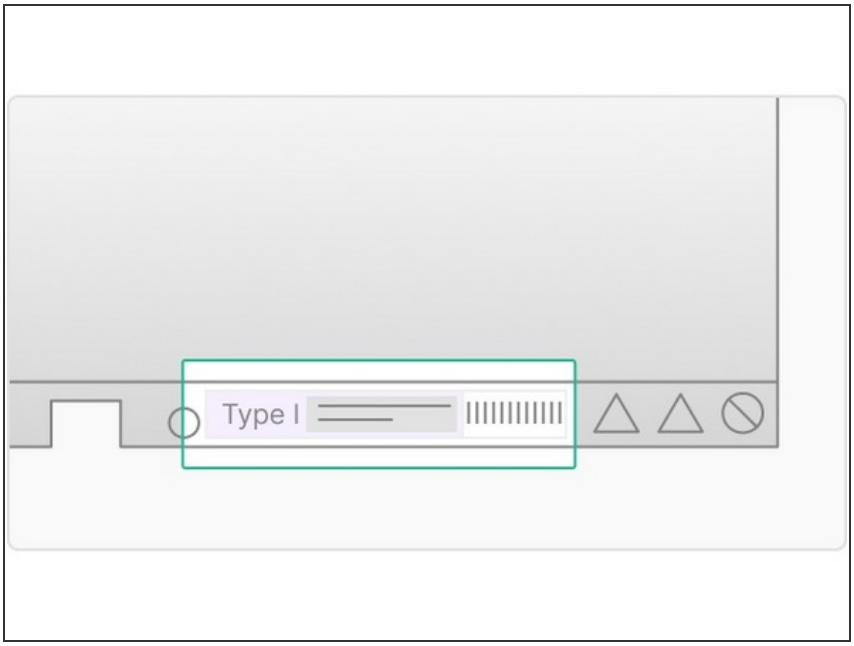

Step 1 — Filament Storage

- Always try to keep filament dry, to prevent moisture entering the filament and making it brittle
- Place the filament directly into a Material Pod with desiccant or leave in sealed packaging until you intend to use it

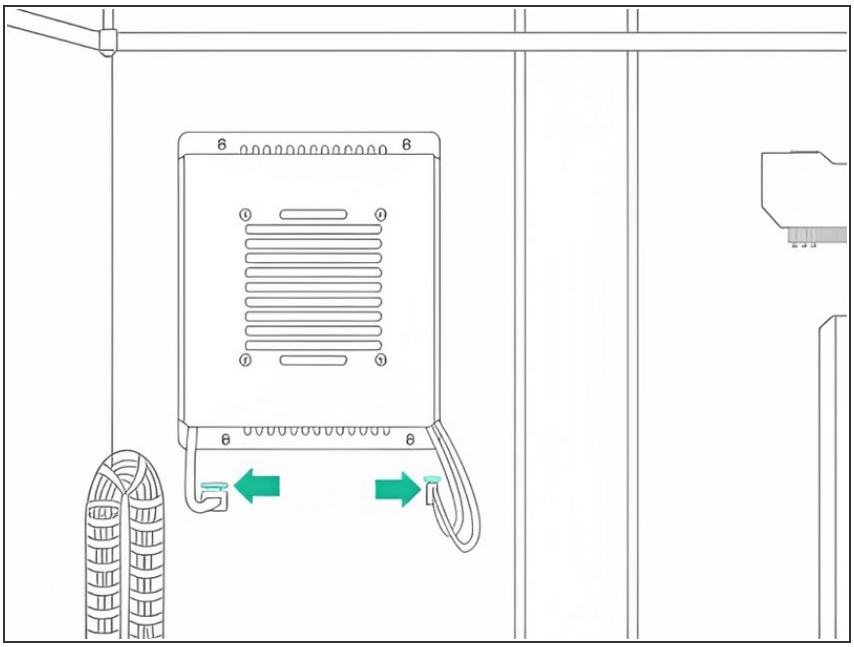

Step 2 — Print Bed Maintenance

- Treat the surface of print beds well, avoiding metal scrapers and wipe away any finger oils with rubbing alcohol
- Always make sure that the right surface treatments are applied for the correct filaments being used

Step 3 — HT Heating Times

- When printing in HT, the heated chamber takes a while to heat up - consider heating this before preparing your print job
