

CPU Cooling Fan Installation

How to install the CPU cooling fan kit on your Element HT

Written By: Guy Elston

Step 1 — Video

Installing CPU Cooling Kit for Element

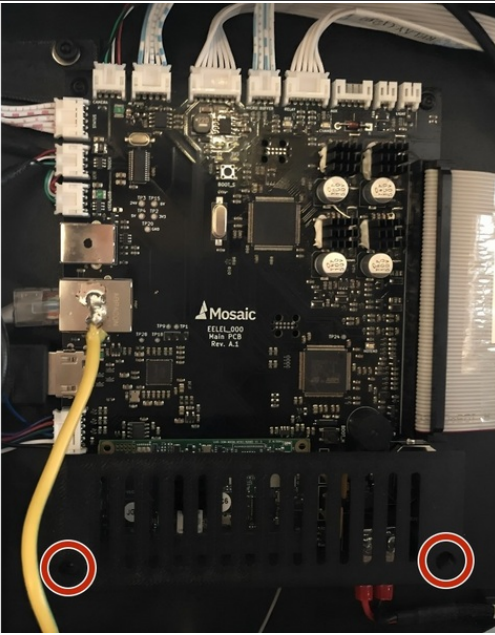

- Continue below for detailed steps

Step 2 — Remove Side Panel

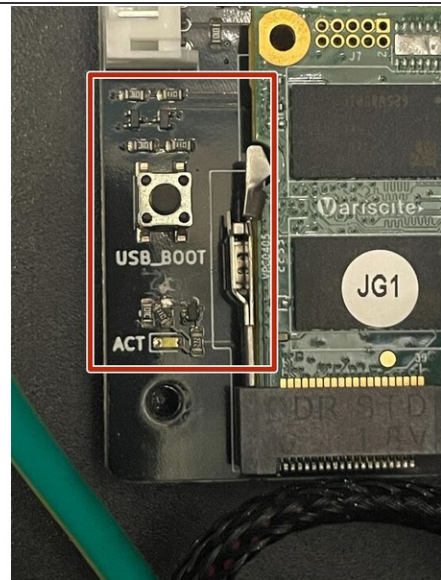

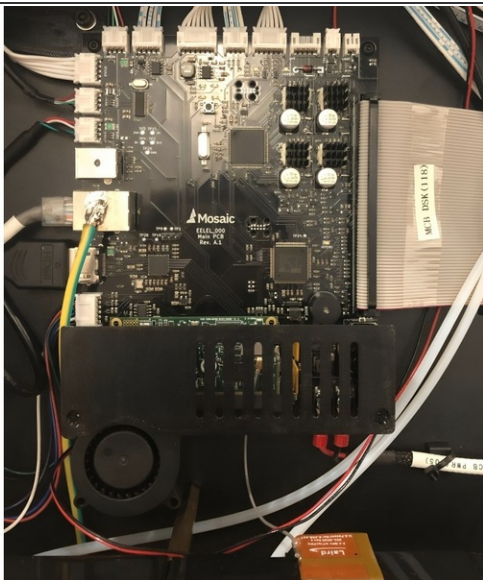

- Power off Element using the power switch at the back. Remove any Material Pods
 - Using a 2mm Hex/Allan tool, remove the 22 screws on the right side panel
- ⚠ Take care not to strip any of the screws when removing them. Unscrew gently and slowly

Step 3 — Remove CPU Shroud

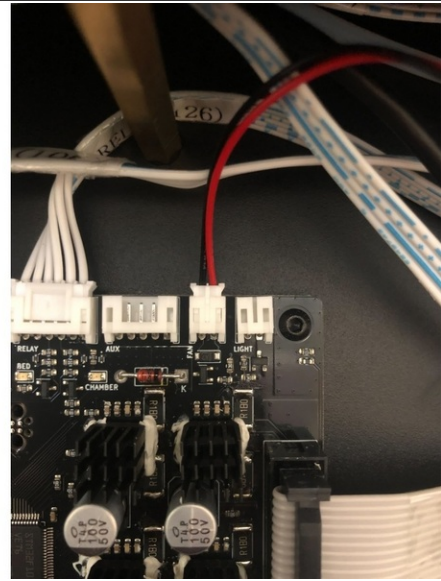

- Use a 2mm Hex/Allan tool to remove the two screws holding the shroud to the mainboard

Step 4 — Install CPU Cooling Shroud

- Remove the zip tie securing the fan cables
 - Gently screw the new CPU cooling shroud onto the mainboard
- ⚠ Take care in particular when screwing in the left hand side of the shroud - be careful not to damage the components above the hole

Step 5 — Install Cabling

- Feed the cables behind the large grey ribbon cable
- Connect to the indicated port on the mainboard, second from the right, marked 'FAN' in small lettering underneath

Step 6 — Reinstall the Side Panel

- Reinstall the side panel before turning the printer back on
- The CPU cooling fan will automatically turn on whenever the printer is in use
