ScotEID Library

BVD Lookup

Written By: ScotEID

Step 1 — BVD Lookup

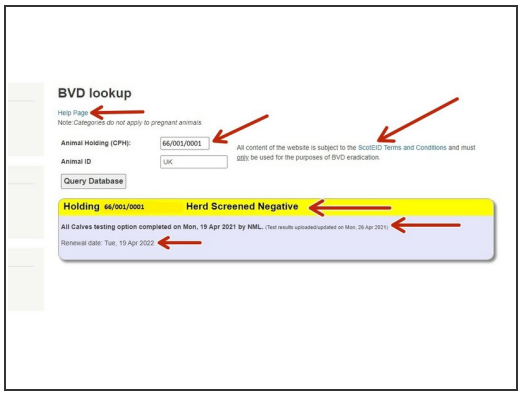

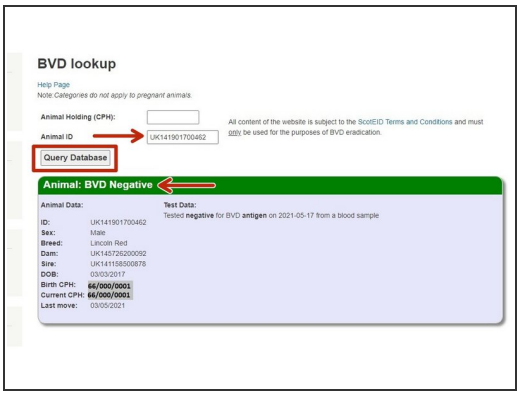

- Select **BVD lookup** which is situated under the Cattle Menu in the ScotEID home page.

© 2022

Step 2 — BVD Lookup

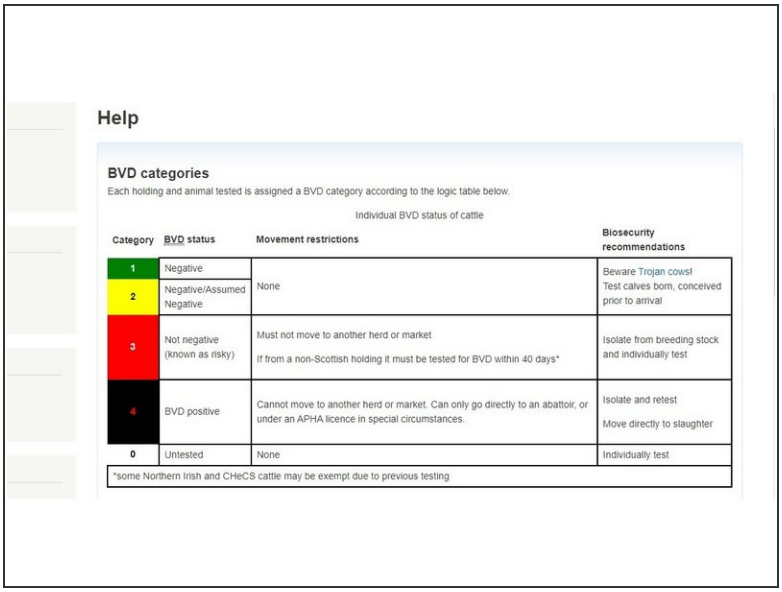

- You can search by Animal Holding (CPH) or Animal ID. Enter in the relevant CPH or Animal ID then click on **Query Database**, where shown in the first image.
- The second image shows the result when searching by CPH. The BVD Herd Status is shown inside a coloured banner (see table in step 3), along with a brief note of when the last test was completed and which type of testing option was competed. It will also show the **BVD renewal date.**
- The third image shows the result when searching by Animal ID. The BVD status for the individual animal is shown inside a coloured banner (see image in step 3) and inside the box you can view the Animal Data and Test Data.
- To view the ScotEID terms and conditions, click on the blue hyperlink labelled ScotEID Terms and Conditions, where shown in the first image.

ⓘ For a full description of the different BVD Categories and Herd Status, click on the blue hyperlink labelled **Help Page**, where shown in all images then go to Step 3 to view this information

Step 3 — BVD Help Page

Help

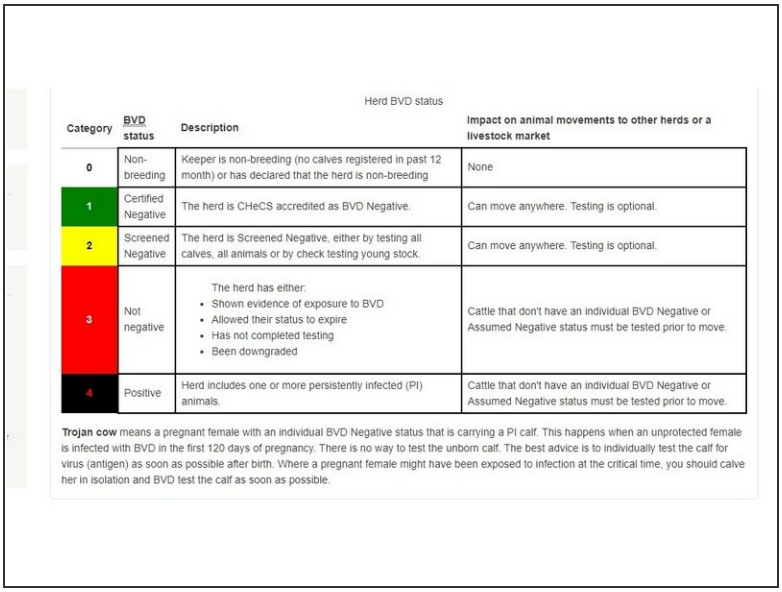

BVD categories

Each holding and animal tested is assigned a BVD category according to the logic table below.

Individual BVD status of cattle

Category	BVD status	Movement restrictions	Biosecurity recommendations
1	Negative	None	Beware Trojan cows! Test calves born, conceived prior to arrival
2	Negative/Assumed Negative		
3	Not negative (known as risky)	Must not move to another herd or market If from a non-Scottish holding it must be tested for BVD within 40 days*	Isolate from breeding stock and individually test
4	BVD positive	Cannot move to another herd or market. Can only go directly to an abattoir, or under an APHA licence in special circumstances.	Isolate and retest Move directly to slaughter
0	Untested	None	Individually test

*some Northern Irish and CHeCS cattle may be exempt due to previous testing

Herd BVD status

Category	BVD status	Description	Impact on animal movements to other herds or a livestock market
0	Non-breeding	Keeper is non-breeding (no calves registered in past 12 month) or has declared that the herd is non-breeding	None
1	Certified Negative	The herd is CHeCS accredited as BVD Negative.	Can move anywhere. Testing is optional.
2	Screened Negative	The herd is Screened Negative, either by testing all calves, all animals or by check testing young stock.	Can move anywhere. Testing is optional.
3	Not negative	The herd has either: • Shown evidence of exposure to BVD • Allowed their status to expire • Has not completed testing • Been downgraded	Cattle that don't have an individual BVD Negative or Assumed Negative status must be tested prior to move.
4	Positive	Herd includes one or more persistently infected (PI) animals.	Cattle that don't have an individual BVD Negative or Assumed Negative status must be tested prior to move.

Trojan cow means a pregnant female with an individual BVD Negative status that is carrying a PI calf. This happens when an unprotected female is infected with BVD in the first 120 days of pregnancy. There is no way to test the unborn calf. The best advice is to individually test the calf for virus (antigen) as soon as possible after birth. Where a pregnant female might have been exposed to infection at the critical time, you should calve her in isolation and BVD test the calf as soon as possible.

- The first image shows the Individual Status of Cattle, outlining the necessary movement restrictions and Biosecurity recommendations.
- The second image shows the **Herd BVD Status** outlining the categories, the description and impact on animal movement to other herds or a livestock market.
