TCsi Expert Deployment Module - Archive and Verify

TCsi Expert Deployment module: Archive and Verify.

Written By: Ryan Levrini

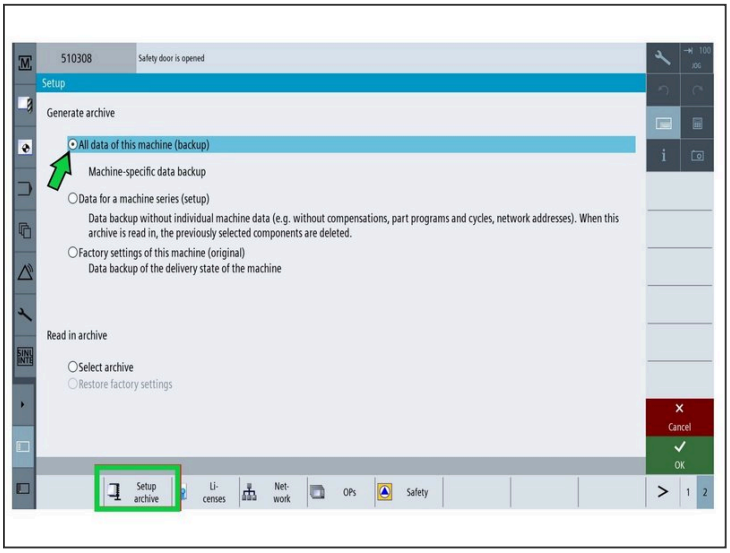

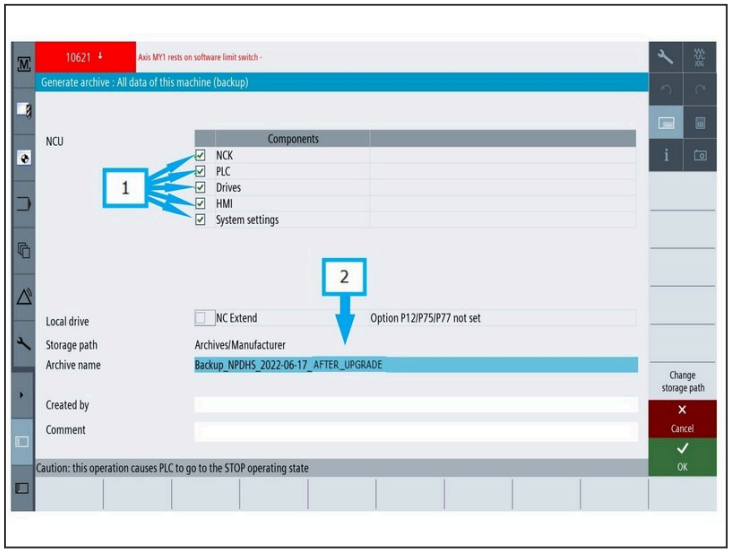

INTRODUCTION

One part of the TCsi Create My Config Expert software upgrade. It is built into the Expert Deployment guide for each lathe; run it from there so the steps are done in order.

© 2026

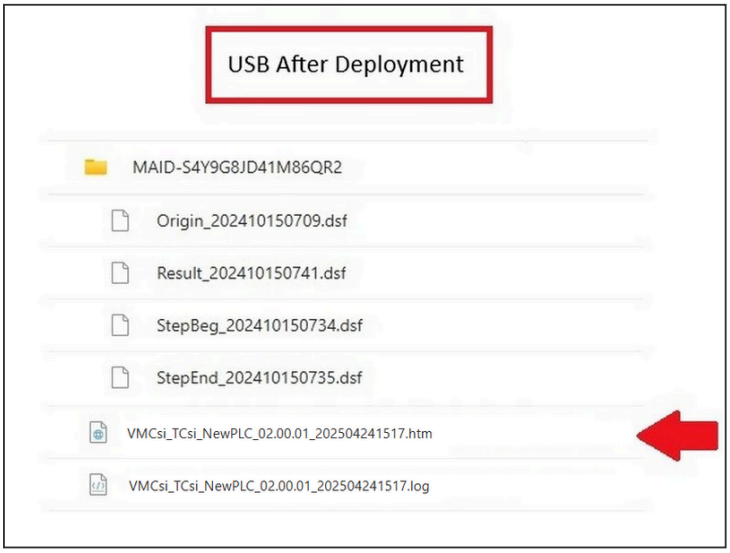

Step 1 — Archive New System

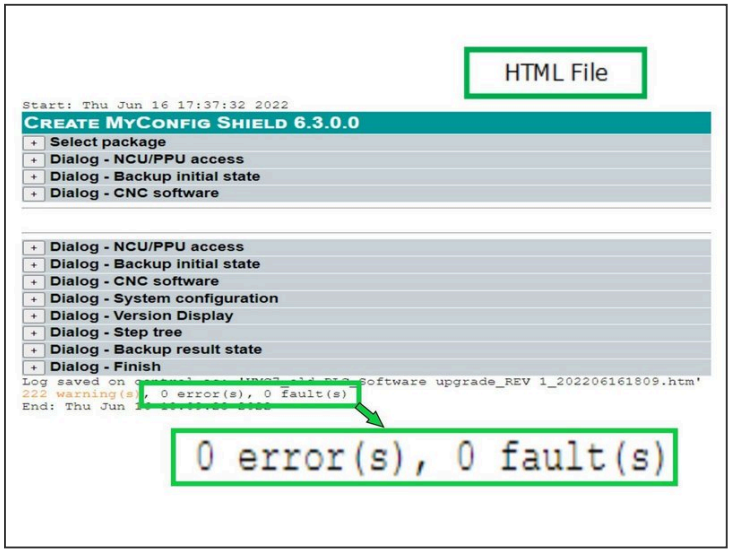

- Go to **[Setup]** → **[Page 2]** → **[Setup Archive]** → **[All data of this machine]**.
- **(1)** Make sure all five components are checked.
- **(2)** Select the **[Archive name]** field. Name the file Backup_NPDHS-YYYY-MM-DD_AFTER_UPGRADE and press **[OK]**.

Step 2 — Check HTML File

- After deployment, the contents of the USB stick are shown with the HTML file highlighted.
- Open the HTML file on the Siemens control, or in a browser on a computer.
- Near the bottom of the file, check the **errors** and **faults** fields. Both should read **0**. If not, report it to TRAK Engineering.
