Steps to remove prints off the printer.

Written By: Erik Hung

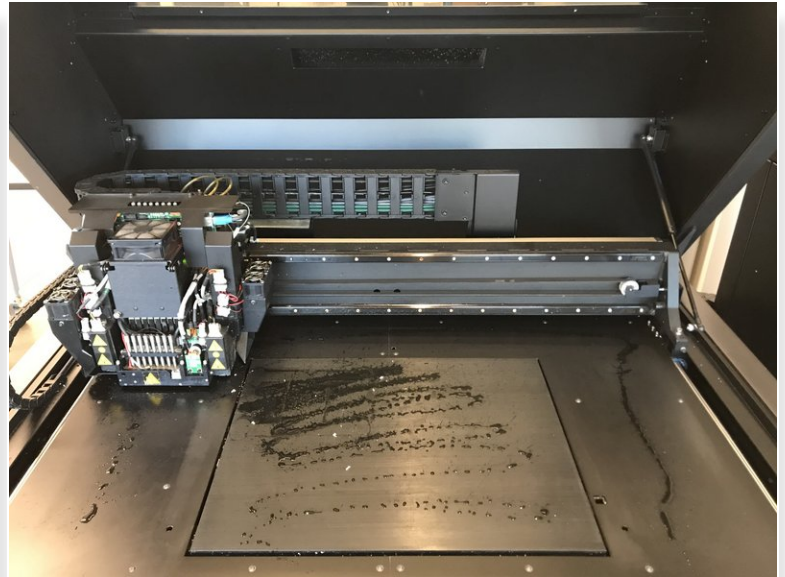

Step 1 — Removing Prints

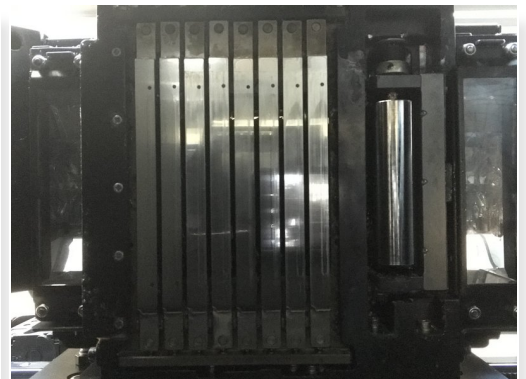

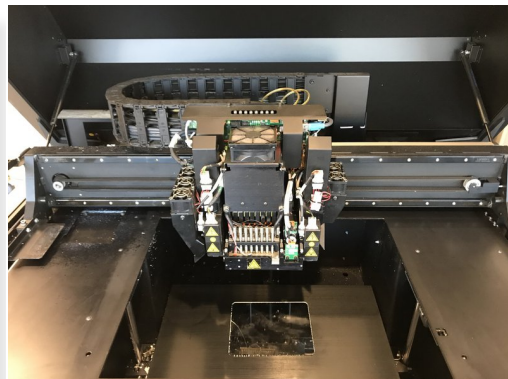

- Using wide scraper, remove the parts off the build plate onto a blue towel
 - ⓘ There will be a "raft" layer left over
- Using the sharper/smaller scraper, remove the "raft" layer and dispose of it
- Set parts aside

Step 2 — Clean Build Plate

- Using deionized water, spray the build plate
- Using the woven fiber cloth, wipe away any residue on build plate and surrounding areas
- ❗ It is not necessary to completely dry off the build plate, but do not leave pools of water

Step 3 — Head Cleaning

- Options -> Wizards -> Head Cleaning
- Follow steps, cleaning UV lamps, roller, and print heads
