

Connex: Pattern Test

How to perform the pattern test and how to troubleshoot.

Written By: Erik Hung

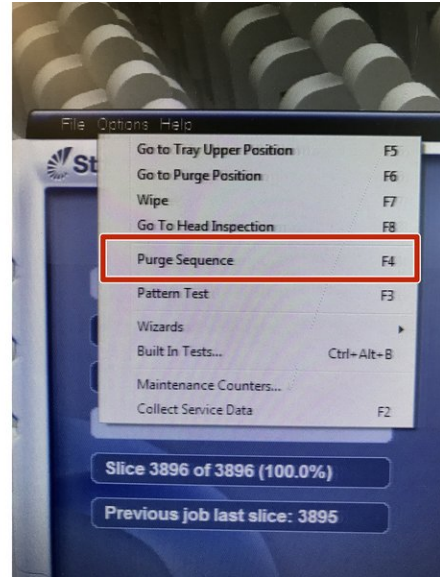

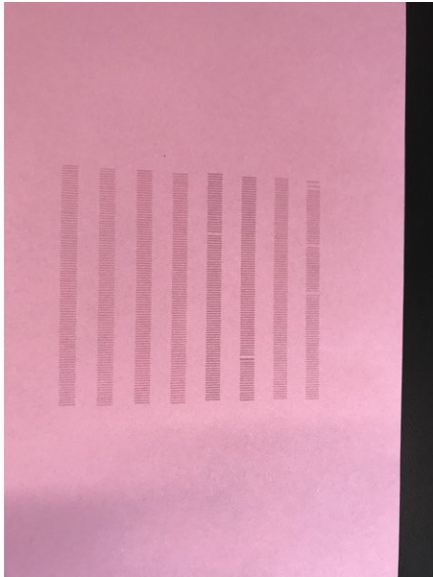

Step 1 — Set up paper

- Tape down pink paper onto the surface to the left of the buildplate
- Start Pattern Test
- ① Pattern test is a visual confirmation of how the print heads are functioning and is solely for the operator

Step 2 — Review Pattern Test

- Check for missing lines on pattern test

i If some lines are missing in a scattered pattern, print heads are still good and operational

⚠ If multiple lines are missing from a single head/section, run a purge sequence

- Options -> Purge Sequence
- Run pattern test again, if there are still chunks missing, run through a head cleaning procedure
 - If there are still issues, this will most likely indicate an issue with the print head and require a print head replacement
